

CAT Controller Courier # 05

February 2007

Greetings!

For those of you we saw at APSP Region I & II show in Atlantic City, we thank you for stopping by and hope that all of you had safe travels home. This month's newsletter brings your attention to some new beginnings for CAT Controllers as well as some helpful hints. The newsletter focuses on subjects such as; CAT's new presence in the specification market, what could be making your controller act up, and also we offer you the opportunity to take advantage of a 30 DAY FREE activation on all CAT wireless communicating controllers. We hope that all of you enjoy this month's edition of the CAT Controller Courier.

CAT Controller's New Presence in the Spec. Market

CAT Controllers, Inc. is making their presence known in the commercial design and specification market. With the introduction of the CAT 5000 wireless satellite web-based water chemistry controller into our product line, we are able to meet the needs of our customers building in the "A" market. The CAT 5000 provides customers with pH & sanitizer control as well as temperature logging & control capabilities, flow rate display & logging, and much more. The CAT team has been meeting with many of the industries design engineers; Counsilman & Hunsaker, Ohlsen Lavoie, Water Technologies, Aquatic Development Group and Ramaker & Associates. These are just some of the companies we have been conferencing with. Please be sure to contact CAT Controllers to request engineering specifications or introduce CAT to any of your preferred designers that you may be using in your market. Email CAT Your Preferred Design Engineer....

Where Do You Buy Your Chemical Feed Pumps?

Who provides you with your chemical feed pumps? CAT Controllers, Inc. is a master distributor for Stenner peristaltic pumps. Stenner has been a leader in the pump manufacturing industry for 50 years. CAT Controllers makes it easy for our customers to provide their clients with one stop shop chemical control. CAT would like to help you receive the best in automated chemical control in regards to equipment, service, and pricing. Contact us with your current pricing on your chemical feed pumps and let CAT provide you with a better value.

Tell CAT what you pay? Let us match or beat your current pricing!

Something Is Wrong With My Controller!

Have you checked your probes or these other factors?

Two things that will make your controller's pH and ORP readings act unordinary. The first and most important is your chemical balancing via your manual readings and the second is your probe/sensor condition. Items that may appear to or genuinely cause your controller to act out of the ordinary:

- Acid dilution is too strong, may cause your pH to dive.
- Acid dilution is too weak, may cause your pH to creep up.
- Stray current in the filtration system, may cause rapid & dire fluctuation of ORP.
- pH & ORP probes/sensors are reversed at the controller, will cause readings of 9.9pH or 0.0pH and ORP reading of 999.
- If the probes have dried out, will most likely cause readings of 9.9pH and ORP 000 or 999.
- Suction side installations of erosion feeders, will cause a dramatic spike in the ORP possibly putting the
- controller into ORP High Alarm for a period of time.
- Low Total Alkalinity, will result in fluctuating pH readings
- 50ppm Cyanuric Acid and above will result in much lower ORP readings.

For any questions regarding your probe behavior
contact Tim Fields at 800-657-2287 or
tfields@chemauto.com

FREE 30 Day Activation on all CAT 4000's and CAT 5000's

CAT Controllers wants all of our customers to be able to discover what the Poolcomm website can do for them. CAT is offering a FREE 30 DAY ACTIVATION for each CAT 4000 & CAT 5000 that has never been activated before. The Poolcomm website provides customers with:

- Unlimited Data Storage
- Bi-Directional Control of pH and ORP settings
- Remote alarm notifications to e-mail and cell phones
- Trouble shooting tips
- Pool Service Survey Logs
- Graphs

The Poolcomm website also allows you to offer your customers the ability to monitor their water from any internet compatible computer in the world. Please be sure to contact Troy McGinty at 800-657-2287 to activate and register your controllers. Take advantage of 30 DAYS FREE PER CONTROLLER!! Our Price: \$0.00 FOR 30 Days! Request Your FREE 30 DAY Activation

Sincerely,

Troy McGinty
