

Salt Chlorination

It's amazing what a little salt can do to enhance your pool experience.

Salt Chlorination – Sparkling-soft water, automatically.

Having a properly sanitized and balanced pool is important for two reasons: swimmer comfort and safety. But it can also dramatically extend the life of your pool and spa, materials and equipment. Wind, rain, sun and even the swimmers themselves affect water quality. That's why more pool owners are choosing salt chlorination to sanitize their pools over traditional chlorine methods. It gives them silky-soft, clean water with none of the negative effects of traditional chemically treated water, for the best pool experience, automatically.

"I would not own a pool without a salt-chlorination system. Salt-chlorinated pools are a different swimming experience. The change in pool water quality is amazing. Once you have experienced the silky-soft water, you will never go back to chemical chlorine again." Frank Disher, Alpha Pool Service, Keller, TX

THE SALT ADVANTAGE

Choose salt for better results.

Spend more time enjoying your pool and less time working on it. With salt chlorination, you don't have to mix, measure or mess around with liquid or tablet chlorine. Heavy chemical odors, dry itchy skin, red eyes and bleached clothes are a thing of the past. Salt chlorination satisfies 100% of your pool and spa's sanitization needs, leaving you with water that's always clean, clear and luxuriously soft. Salt-chlorination systems convert salt into a virtually endless supply of fresh, pure chlorine. That leaves you time to enjoy your pool. It's amazing how a little salt can make your pool experience a lot more relaxing.

"Sealing the stone around your pool can virtually eliminate erosion. We seal all stone, whether pool owners use a salt system or not. It is relatively inexpensive and it increases the life of natural stone products." Joel Klapprodt, Klapprodt Kustom Pools and Spas, Keller, TX

OPTIMAL WATER QUALITY THROUGH CHEMISTRY AUTOMATION

Sense and Dispense® delivers the right balance.

Continuous filtration, cleaning and chlorine sanitization are not enough to keep your pool and spa in top shape. Balancing your pool's pH is vital. Let the pH drop too low and the water becomes acidic and corrosive, attacking anything it touches. When the pH is too high, mineral deposits and scale can form. That's where Sense and Dispense comes in. Sense and Dispense monitors pH and chlorine levels – regulating chlorine output and managing pH. It continually samples the water and dispenses just what the water needs to stay balanced. Automating chemistry management is safer and more comfortable for swimmers, and it protects your pool's finishes and equipment while dramatically lowering your operating costs.

"Integrating Sense and Dispense with sanitization was easy. There wasn't a need for additional devices, and my installation costs were low. I have used Sense and Dispense for months, and the added convenience is priceless. I would recommend this system to all pool owners who want to spend more time in the pool and less time maintaining it." Jeff Kerber, Jeff Kerber Pool Plastering Inc., Montclair, CA

.....
"Proper water chemistry and maintenance are the keys to extending the life of pool surfaces and equipment regardless of the sanitization method. In my experience, I have seen much more damage done to pools that are using old fashioned chlorine methods rather than salt systems." Frank Disher, Alpha Pool Service, Keller, TX
.....

SALT AND CHEMISTRY AUTOMATION MAKES SENSE

Enjoy your pool and spa for years to come.

Whether you're having a new pool built or retrofitting an existing pool, you can limit the effects weathering has on materials like decking and help extend the life of your pool materials. As with any natural material exposed to water and the elements, erosion and natural weathering can occur in or around the pool or spa area. Salt chlorination has been around for decades, and Hayward is the #1 brand in salt chlorination, with over 1 million salt systems installed in backyards throughout the United States.

All methods of chlorination can have negative effects on pool finishes and equipment when water is not properly balanced. Improper chemistry is to blame, not the form of chlorination. Here are some key things to keep in mind to help protect your investment.

New pools:

- Keep water consistently in balance
- Ask your builder and stone provider what stone and materials are best suited for your pool and your lifestyle
- Consider using a harder, less porous stone
- Be sure your builder seals all stone used around pool, spa and water features to protect your investment

Retrofitting the pool you have:

- Keep water consistently in balance
- Follow the stone professional's recommended maintenance schedules by sealing your stone as needed
- Following the professional's recommended resealing schedule will greatly reduce the effects of weathering

Extend your pool's outside appearance and protect your investment.

- Keep water consistently in balance
- Seal all outside material – including wood and stone
- Clean debris from decking and nearby areas
- Regularly hose deck area, away from pool, to remove debris
- Annually inspect and maintain your pool to prevent wear

By following these simple tips, you can keep your pool, spa and surrounding materials going strong for years to come. Protect your investment – consult your pool professional on the sanitization system and maintenance routine right for your environment.

Salt Chlorination from the #1 brand in salt chlorination. More Hayward® salt-chlorination systems have been installed in the U.S. than any two other manufacturers combined. Look for genuine Hayward salt chlorination – the #1 brand people trust.

SALT CHLORINATION AND AUTOMATION

ProLogic® and AquaPlus® Controls, Salt Chlorination, and Chemistry Automation

Manage all pool and spa functions, as well as other backyard features, effortlessly, remotely. These flexible and scalable professional-grade series are the first Total Pool Management® lines in the industry to offer integrated water chemistry automation, remote pool management, salt chlorination and control of up to 16 devices. A variety of models lets you choose the level of control that best fits your environment and add options that allow you to work less and play more. You can control your pool from the unit or from any wireless device via AquaConnect® Web remote pool management platform.

SALT CHLORINATORS

AquaRite® Pro, In-Ground Chlorination and Chemistry Automation

Automating your pool chemistry has never been easier with AquaRite Pro and Sense and Dispense chemistry automation. Professional-grade AquaRite Pro takes pool and spa sanitization and chemistry management to new levels, building upon the industry-leading salt chlorinator – AquaRite. This integrated solution automatically senses chlorine and pH levels and dispenses a self-renewing supply of pure chlorine generated from salt, while controlling pH. Integrating chemistry automation with sanitization eliminates the need for an additional device on the pool pad and lowers installation costs. So now you get the most consistent water quality possible – for water that's brilliant, soft and silky smooth.

AquaRite In-Ground Salt Chlorination – The World's #1 Salt Chlorinator

Hayward's AquaRite Salt Chlorinator is the convenient alternative to conventional chlorine – bringing your pool the very best in soft, silky water with no more red eyes, itchy skin or harsh odors. It's remarkably convenient, too, automatically delivering chlorine for the ultimate swimming experience. AquaRite is independently certified by the National Sanitation Foundation (NSF). And with the industry's best warranty support plus 50% or more in savings over conventional chlorine, no wonder it's the world's #1 salt chlorinator today.

AquaRite 120

AquaRite 120 is the newest member of the AquaRite family – the #1 salt chlorinator. It turns salt into chlorine, automatically, at a savings of 50% over conventional chlorine.

AquaRite 120 is pre-wired for fast electrical connection. It plugs into any 120V GFCI-protected outlet – lowering installation time and costs.

Salt & Swim® 3C In-Ground Salt Chlorination

Salt & Swim 3C is our powerful salt chlorination system that delivers the 3 C's of salt chlorination – Comfort and Convenience at a Cost you'll love. By automatically converting ordinary salt into a staggering amount of pure available chlorine, it can save you up to 50% or more on chlorine costs. The convenience of Salt & Swim 3C means no more mixing and measuring and messing around with harsh chlorine, and no more lifting heavy buckets or jugs. This is the industry's best value for a luxuriously soft swimming experience that's easy on the eyes and skin, at a price that's easy on the wallet.

Genuine Hayward TurboCells®

Independently tested and proven by the NSF, genuine Hayward TurboCells have been reliably delivering chlorine for nearly two decades. With savings of 50% or more over conventional chlorine costs, it's not only the #1 salt chlorination cell in the world, it's the best value. Other replacement cells offer significantly less life and less chlorine. To get the most of salt chlorination, at the best possible price, use only genuine Hayward TurboCells.

3 sizes available: 40,000, 25,000 and 15,000 gallons.

TOTAL POOL CHEMISTRY®

Sense and Dispense® Chemistry Automation

Sense and Dispense takes the work out of owning a pool and spa. This professional-grade ORP and pH sense-and-dispense technology was previously only available for commercial pools. Hayward offers an economical approach, with the same level of accuracy, for residential pools. Unlike others on the market, Sense and Dispense uses a proportional feed algorithm that continually tests the water, sampling pH and sanitizer activity, and adjusting chemical feeding on a basis proportional to the demand. Other approaches don't sample the water often enough and release larger doses, which is far less effective and can create highs and lows similar to a manual approach. Sense and Dispense is an option for AquaRite Pro, AquaPlus and ProLogic.
